INTRODUCTION.

Realizing the demand, on the part of the public, for an Atlas which shall give, in a conveniently *small size*, and at a *nominal cost*, all the salient geographical, statistical, and descriptive items of information usually found in larger and more expensive works of this nature, the publishers have, at considerable outlay, prepared this NEW POCKET ATLAS, and confidently submit the result of their labors to the critical judgment of their patrons.

A separate Map, either single or double page, accompanied by one or two pages of reading matter, is devoted to each State and Territory in the United States, and to each Province of the Dominion of Canada. The maps are colored by counties, and, while perfectly clear and legible, show a wonderful amount of detail. They are revised up to the date of issue, and show every railroad in operation and all towns of any importance, the county seats being designated by special heavy-faced type. The reading matter is so arranged under sub-heads as to make it easy to locate, at a glance, any particular subject. It contains a brief historical sketch; all important data regarding area and population, physical and climatic features, and the principal cities; statistics pertaining to agricultural and mineral resources, the manufactures, commerce, trade, and transportation; a review of the educational system, the most important State institutions, and, finally, a synopsis of the principal constitutional and legal features. To all this is added an alphabetical list of the counties with their area and population, and so indexed that any county can readily be located on the respective map.

There is not a page in the Atlas which was not especially compiled and prepared for it. Every item is either directly based upon the census reports of 1890, or, when a subject is not covered by them, upon the best obtainable data. The information is of such an extent that it is, in fact, a *Pocket Encyclopedia* of the United States and Canada, which the publishers confidently place before the reader, infinitely enhanced in value by the maps.

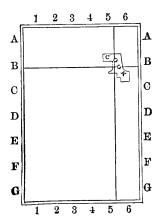

Recognizing the fact that a similar amount of detailed information regarding foreign countries would have enlarged the volume far beyond its necessary limit, a system of skeleton maps has been devised, showing, in a remarkably plain way, their political divisions and chief cities. These skeleton maps are accompanied by tabulated statistics concerning all countries, their capitals and largest cities, and principal articles of export and import.

The POCKET ATLAS which the publishers issued on the basis of the tenth census, that of 1880, met with such approval that many millions of it were sold. Enlarging greatly its scope, while maintaining its general plan, they believe that in the present volume they have succeeded in offering to the public the best and most comprehensive work of its kind.

EXPLANATION.

The index letter and figure following the name of a county, in the list given for every State and Territory, refer to that point on the map at which lines, if drawn between the respective marginal letters and figures, would cross each other. For example, to find "Cook County, B-5," let the diagram below represent the map; Cook County is found near the crossing of lines B-B and 5-5.

In the list of principal cities given with each continent, the capitals of all countries are designated by special heavy-faced type.
